

Series 2 Car Audio Switching System

PRODUCT HOOKUP DIAGRAMS

Today's high power car audio amplifiers use a variety of different grounding schemes. When installed in a car, the grounding scheme does not cause problems because the head unit and the amp are always connected. However, in a switching system, products are constantly being disconnected and reconnected. Sometimes, this can cause an amplifier to become unstable. To avoid this problem, use the universal product hookup for amplifiers and sources shown below. Make sure each shielded cable is connected securely to ground and a ground jumper is connected as shown.
