

# 1725M-BT

## Audio Demo with Bluetooth®

## Audio Demo with Bluetooth® Option

- Customers can hear their own music on any speaker or pair of headphones
- Select up to eight audio products via push-button, touchscreen, or TouchSelect control panel
- Compatible with professional media players including Model 1703, 1704, and BrightSign®.

The Audio Authority® 1725M-BT is an audio switching module that compares up to eight audio products. Basic switching works via push-buttons, but more features are available using a touchscreen or TouchSelect control panel. Both digital audio (optical or coax) and analog audio may be active, and the demo products may be selected via push-buttons located near the products, and/or via a touch sensitive control panel.

### Features:

- One audio input to 8 headphones, speakers, or soundbars
- Separate audio pathways for digital audio and/or analog audio connections
- Push-button, touchscreen, or touch panel control options
- Timeout triggers silent mode after an idle period
- Keep-awake feature prevents products from entering sleep mode
- Bluetooth pair function available via serial command
- Communicates with media player via serial commands

### Control Options:

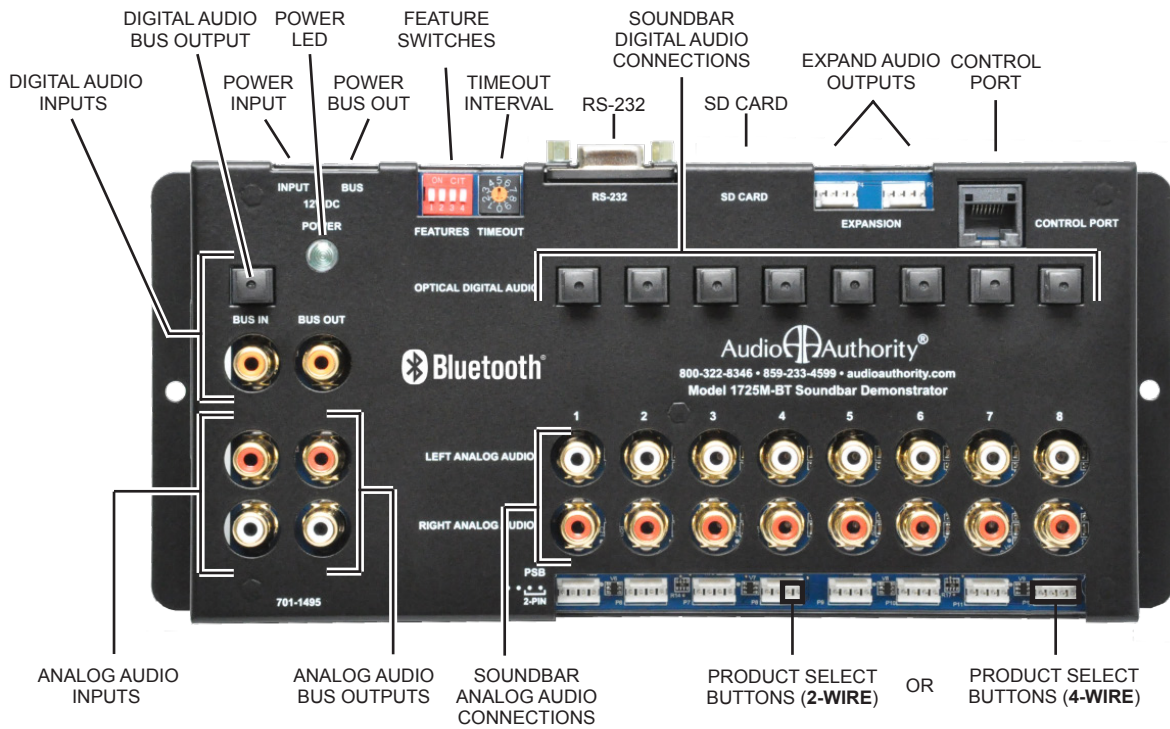

TOUCHSCREENS

TOUCHSELECT CONTROL PANELS

PUSH-BUTTONS

### Example System:

A TouchSelect panel provides eight touch positions to select sound bars, and a Bluetooth pairing button. The panel connects to the 1725M-BT Control Port. The 1725M-BT communicates with the media player via RS-232. Each sound bar may have a button as a secondary selection method, that also serves to indicate the active product.
