

Special Series 1500 Installation Configurations

There are a few different scenarios you may encounter when installing the Series 1500 Intercom System. The following diagrams illustrate the adaptability of the Series 1500 Intercom System for unique configurations.

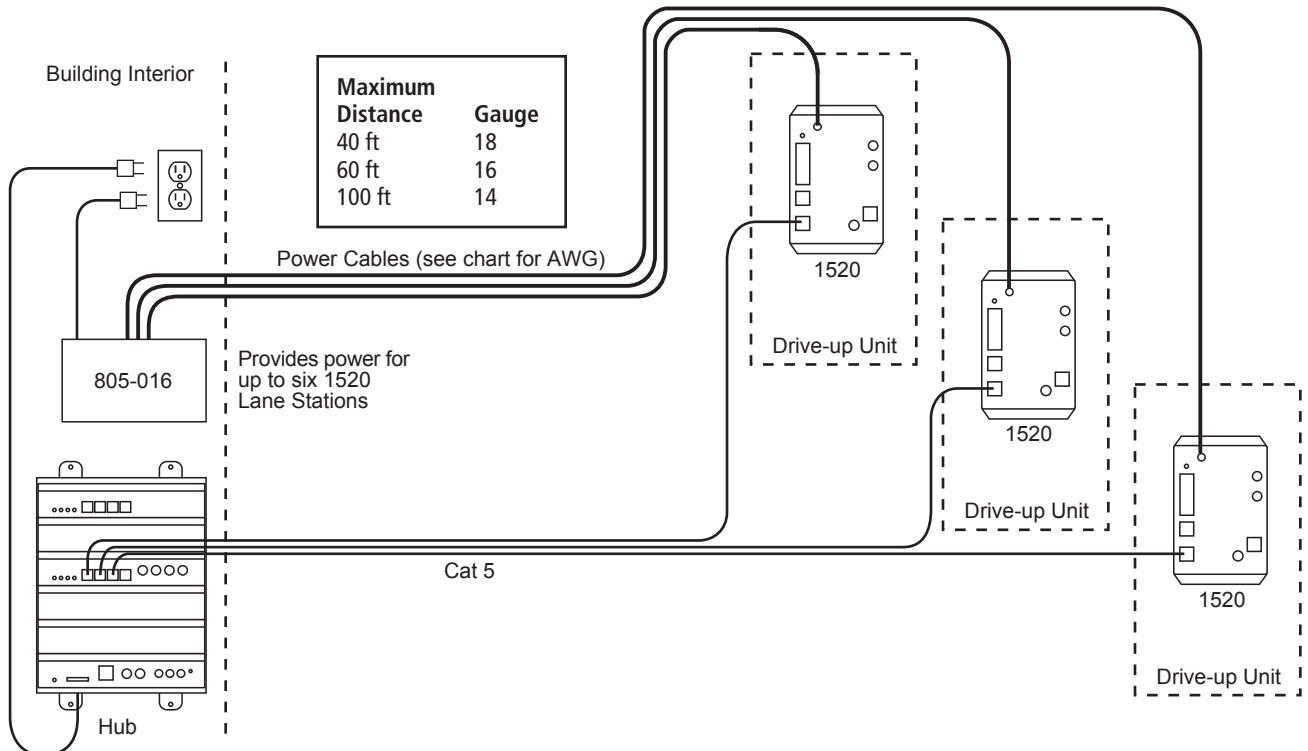

Retrofit Using Existing Wiring

In retrofit applications where existing shielded 3-pair audio wiring and coaxial video cable have already been run, it is unnecessary to pull new Cat 5 wiring. Instead, use the following configuration.

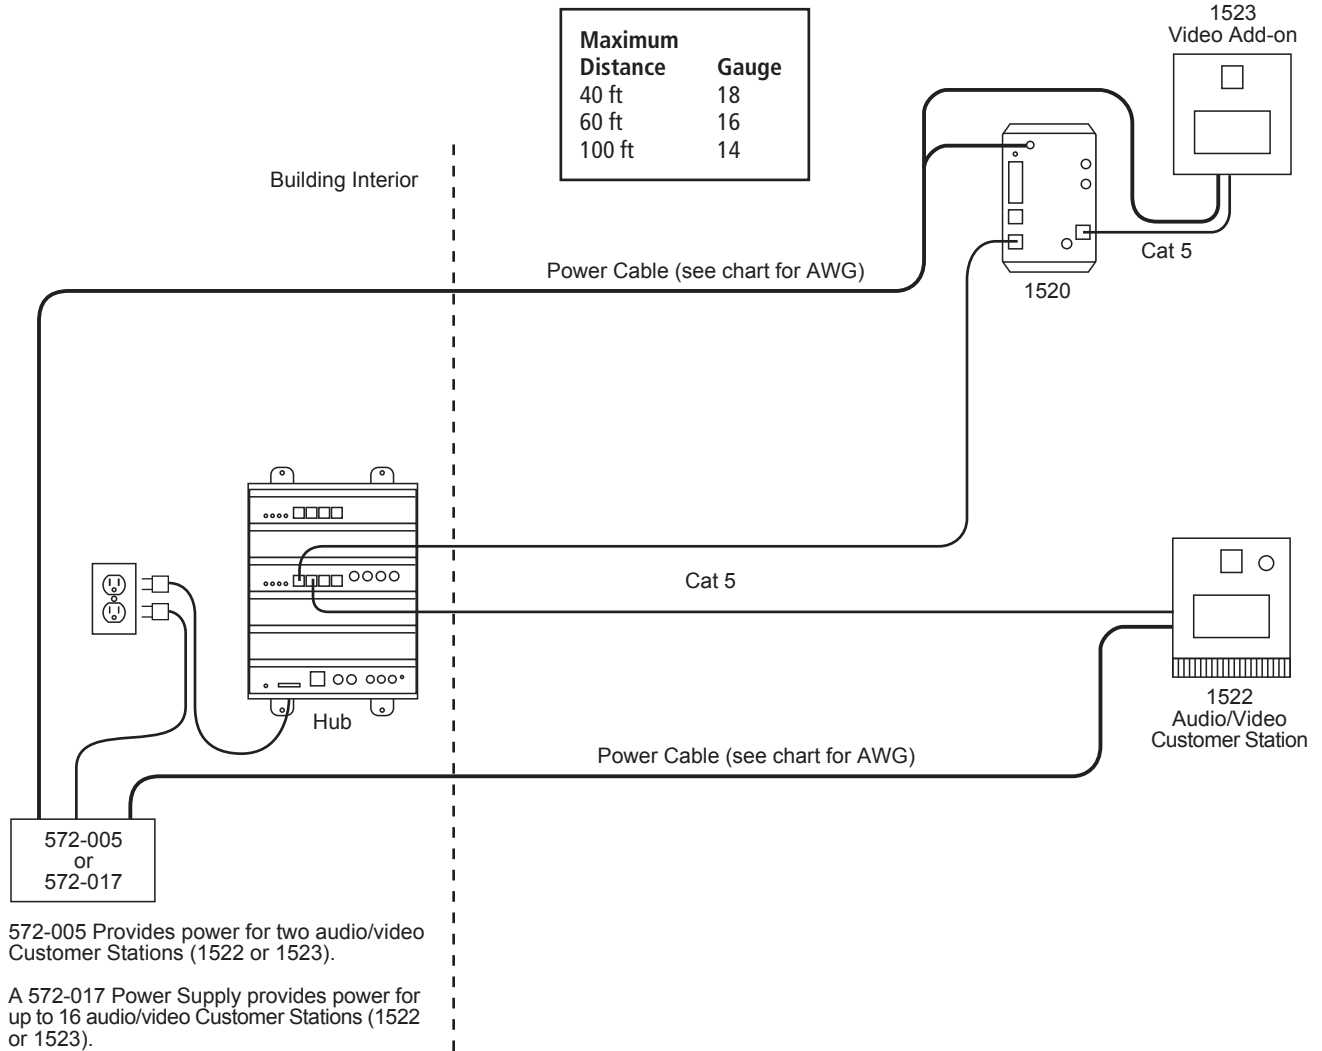

New Installation With Power Supplied Indoors

If AC power is unavailable in the drive-up enclosure, the following configuration is recommended.

1522 AV Customer Stations or 1523 Video Add-ons Installed with Power Supplied Indoors

If 1522 or 1523 models are included in your installation and AC power is unavailable at the drive-up, one 572-005 power supply can be used for two Model 1522 or Model 1523 with 1520 Customer Station as shown below. If more AV Customer Stations must be powered in this way, use one 572-017 power supply for up to 16 AV Customer Stations.
